#### Abstract

Problem/Condition: Priority health risk behaviors that contribute to the leading causes of mortality, morbidity, and social problems among youth and adults often are established during youth, extend into adulthood, and are interrelated. Reporting Period: February through May 1993. Description of System: The Youth Risk Behavior Surveillance System (YRBSS) monitors six categories of priority health risk behaviors among youth and young adults: behaviors that contribute to unintentional and intentional injuries, tobacco use, alcohol and other drug use, sexual behaviors, dietary behaviors, and physical activity. The YRBSS includes a national, school-based survey conducted by CDC and state and local school-based surveys conducted by state and local education agencies. This report summarizes results from the national survey, 24 state surveys, and nine local surveys conducted among high school students during February through May 1993. Results and Interpretation: In the United States, $72 \%$ of all deaths among school-age youth and young adults are from four causes: motor vehicle crashes, other unintentional injuries, homicide, and suicide. Results from the 1993 YRBSS suggest that many high school students practice behaviors that may increase their likelihood of death from these four causes: $19.1 \%$ rarely or never used a safety belt, $35.3 \%$ had ridden with a driver who had been drinking alcohol during the 30 days preceding the survey, $22.1 \%$ had carried a weapon during the 30 days preceding the survey, $80.9 \%$ ever drank alcohol, $32.8 \%$ ever used marijuana, and $8.6 \%$ had attempted suicide during the 12 months preceding the survey. Substantial morbidity and social problems among adolescents also result from unintended pregnancies and sexually transmitted diseases, including human immunodeficiency virus (HIV) infection. YRBSS results indicate that in 1993, 53.0\% of high school students had had sexual intercourse, $52.8 \%$

of sexually active students had used a condom during last sexual intercourse, and $1.4 \%$ ever injected an illegal drug. Among adults, $67 \%$ of all deaths are from three causes: heart disease, cancer, and stroke. In 1993, many high school students practiced behaviors that may increase the risk for these health problems: 30.5\% of high school students had smoked cigarettes during the 30 days preceding the survey, only $15.4 \%$ had eaten five or more servings of fruits and vegetables during the day preceding the survey, and only $34.3 \%$ had attended physical education class daily.
Actions Taken: YRBSS data are being used nationwide by health and education officials to improve school health policies and programs designed to reduce risks associated with the leading causes of mortality and morbidity. At the national level, YRBSS data are being used to measure progress toward achieving 26 national health objectives and one of eight National Education Goals.

## INTRODUCTION

In the United States, 72\% of all deaths among school-age youth and young adults $5-24$ years of age are from only four causes: motor vehicle crashes ( $30 \%$ of all deaths in this age group), other unintentional injuries (12\%), homicide (19\%), and suicide (11\%) (1). Substantial morbidity and social problems also result from the approximately 1 million pregnancies that occur among adolescents (2) and the more than 10 million cases of sexually transmitted diseases (STD) that occur each year among young persons $15-29$ years of age (3). In the United States, $67 \%$ of all deaths and substantial morbidity among adults $\geq 25$ years of age are from only three causes: heart disease ( $35 \%$ of all deaths in this age group), cancer (25\%), and stroke (7\%) (1). Therefore, six categories of behaviors contribute to the leading causes of morbidity and mortality that affect the nation: behaviors that contribute to unintentional and intentional injuries; tobacco use; alcohol and other drug use; sexual behaviors that contribute to unintended pregnancy and STD (including human immunodeficiency virus [HIV] infection); unhealthy dietary behaviors; and physical inactivity. These behaviors, which frequently are interrelated, often are established during youth and extend into adulthood.

To monitor the priority health risk behaviors in each of these categories among youth and young adults, CDC developed the Youth Risk Behavior Surveillance System (YRBSS) (4). The YRBSS includes national, state,* and local school-based surveys of high school students. National surveys were conducted in 1990, 1991, and 1993. ${ }^{\dagger}$ Comparable state and local surveys were first conducted in 1990, during which time 24 states and eight large cities participated. In 1991, 29 states and 10 cities conducted surveys, as did 43 states and 13 cities in 1993. This report summarizes the results from the 1993 national school-based survey and from selected state and local school-based surveys.

[^1]
## METHODS

## Sampling

The 1993 national school-based survey employed a three-stage cluster sample design to produce a nationally representative sample of students in grades 9-12. The first-stage sampling frame contained 1,928 primary sampling units (PSUs), consisting of large counties or groups of smaller, adjacent counties. From the 1,928 PSUs, 50 were selected from 16 strata formed on the basis of the degree of urbanization and the relative percentage of black* and Hispanic students in the PSU. The PSUs were selected with probability proportional to school enrollment size. At the second sampling stage, 199 schools were selected with probability proportional to school enrollment size. To enable separate analysis of black and Hispanic students, schools with substantial numbers of black and Hispanic students were sampled at relatively higher rates than were all other schools. The third stage of sampling consisted of randomly selecting one or two intact classes of a required subject (e.g., English or social studies) from grades 9-12 at each chosen school. All students in the selected classes were eligible to participate in the study.

A weighting factor was applied to each student record to adjust for nonresponse and for the oversampling of black and Hispanic students. Numbers of students in other racial/ethnic groups were too small for meaningful analysis. The weights were scaled so that the weighted count of students was equal to the total sample size and so that the weighted proportions of students in each grade matched national population proportions. SUDAAN was used to compute $95 \%$ confidence intervals (5). The national data are representative of students in grades $9-12$ in public and private schools in the 50 states and the District of Columbia.

The 1993 state and local school-based surveys employed a two-stage cluster sample design to produce representative samples of students in grades 9-12 in their jurisdiction. In most states and cities, the first-stage sampling frame consisted of all public schools containing any of grades $9-12$. Schools were selected with probability proportional to school enrollment size. At the second sampling stage, intact classes of a required subject or a required period (e.g., second period) were randomly selected. All students in the selected classes were eligible to participate in the study. Some states and cities modified these procedures to meet their individual needs. For example, in some states and cities classes were selected as the first stage of sampling, or all schools, rather than a sample of schools, were selected to participate.

The data sets from the 24 state and nine local surveys with an overall response rate of at least $60 \%$ and appropriate documentation were weighted (Table 1). Weighted data from most of these states and cities can be generalized to all public school students in grades 9-12 in the jurisdiction. The unweighted data from eight state and four local surveys apply only to the students participating in the survey. Surveys from Louisiana and New York excluded students from New Orleans and New York City, respectively.

For the national survey, the school response rate was $78 \%$, and the student response rate was $90 \%$, for an overall response rate of $70 \%$ (Table 1). A total of 16,296 questionnaires were completed in 155 schools. For the state and local surveys, school response rates ranged from $48 \%$ to $100 \%$, student response rates ranged from $47 \%$ to

[^2]$91 \%$, and overall response rates ranged from $41 \%$ to $86 \%$. Sample sizes ranged from 507 to 4,522 . In the national, state, and local surveys, students were evenly distributed across grades and between sexes (Table 1).

Incidence rates for two variables were calculated to provide data for monitoring relevant year 2000 national health objectives. For weapon-carrying, students who replied that they carried a weapon 2 or 3 days were assigned a weapon-carrying frequency of 2.5; 4 or 5 days, 4.5 ; and $\geq 6$ days, 6.0 . For physical fighting, students who reported fighting two or three times were assigned a fighting frequency of 2.5 ; four or five times, 4.5; six or seven times, 6.5; eight or nine times, 8.5; 10 or 11 times, 10.5; and $\geq 12$ times, 12.0.

## Data Collection

Survey procedures were designed to protect the students' privacy by allowing for anonymous participation. The self-administered questionnaire was administered in the classroom during a regular class period. Students recorded their responses directly on a computer-scannable booklet or answer sheet. The core questionnaire contained 84 multiple-choice questions. State and local education agencies added or deleted items to meet individual needs. Local parental consent procedures were followed before survey administration.

## RESULTS

## Behaviors that Contribute to Unintentional Injuries

## Safety-Belt Use

Nationwide, $19.1 \%$ of students rarely or never used safety belts when riding in a car or truck driven by someone else (Table 2). White* male students ( $22.6 \%$ ) were significantly more likely than white female students (11.5\%) to rarely or never use safety belts, and 11th- and 12th-grade male students ( $25.1 \%$ and $24.9 \%$, respectively) were significantly more likely than 11th- and 12th-grade female students (12.9\% and $13.5 \%$, respectively) to rarely or never do so. Black students ( $30.3 \%$ ) were significantly more likely than white or Hispanic students ( $17.3 \%$ and $19.5 \%$, respectively) to report this behavior. The prevalence rate of rarely or never using safety belts among the state surveys varied nearly eightfold from $6.3 \%$ to $48.3 \%$ (median: 26.9\%) (Table 3). Among the local surveys, the prevalence rate varied nearly sevenfold from $8.4 \%$ to $57.0 \%$ (median: 33.4\%).

## Motorcycle-Helmet Use

Nationwide, $26.7 \%$ of students had ridden a motorcycle during the 12 months preceding the survey. Of these students, $40.0 \%$ rarely or never wore a motorcycle helmet (Table 2). Male and female Hispanic students ( $58.3 \%$ and $62.3 \%$, respectively) were significantly more likely than male and female white students ( $37.4 \%$ and $36.3 \%$, respectively) to rarely or never wear a motorcycle helmet. The prevalence rate of rarely or never wearing a motorcycle helmet ranged from $16.0 \%$ to $70.0 \%$ (median: 42.1\%) among the state surveys and from $30.4 \%$ to $68.9 \%$ (median: $42.2 \%$ ) among the local surveys (Table 3).

[^3]
## Bicycle-Helmet Use

Nationwide, $75.3 \%$ of students had ridden a bicycle during the 12 months preceding the survey. Of these students, $92.8 \%$ rarely or never wore a bicycle helmet (Table 2). Black male students ( $97.6 \%$ ) were significantly more likely than white male students $(90.8 \%)$ to rarely or never wear a bicycle helmet. The prevalence rate of rarely or never wearing a bicycle helmet ranged from $82.0 \%$ to $98.0 \%$ (median: $95.7 \%$ ) among the state surveys and from $71.2 \%$ to $98.4 \%$ (median: $95.5 \%$ ) among the local surveys (Table 3).

## Riding with a Driver Who Had Been Drinking Alcohol

During the 30 days preceding the survey, approximately one third ( $35.3 \%$ ) of students nationwide had ridden with a driver who had been drinking alcohol (Table 2). Hispanic male students ( $45.1 \%$ ) were significantly more likely than white male students ( $34.7 \%$ ) to report this behavior. Riding with a drinking driver was significantly more likely among 12th-grade male students (42.5\%) than among 9th- and 10th-grade male students ( $30.0 \%$ and $33.0 \%$, respectively). State survey prevalence rates ranged from $22.6 \%$ to $51.9 \%$ (median: $36.4 \%$ ), and local survey prevalence rates ranged from $23.9 \%$ to $45.7 \%$ (median: 32.0\%) (Table 3).

## Behaviors that Contribute to Intentional Injuries

## Carrying a Weapon

Nearly one fourth (22.1\%) of students nationwide had carried a weapon (e.g., a gun, knife, or club) during the 30 days preceding the survey (Table 4). An estimated 92.0 weapon-carrying incidents occurred monthly per 100 students. Across all racial/ ethnic and grade subgroups, male students were significantly more likely than female students to have carried a weapon. Weapon-carrying was significantly more likely among black female students ( $18.9 \%$ ) than among white and Hispanic female students ( $6.9 \%$ and $11.5 \%$, respectively). Prevalence rates ranged from $16.2 \%$ to $33.0 \%$ (median: $24.4 \%$ ) among the state surveys and from $19.1 \%$ to $35.3 \%$ (median: $23.7 \%$ ) among the local surveys (Table 5).

Nationwide, $7.9 \%$ of students had carried a gun during the 30 days preceding the survey (Table 4). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have carried a gun. Black male and black female students ( $20.9 \%$ and $3.8 \%$, respectively) were significantly more likely to have done so than were white male and white female students ( $12.0 \%$ and $1.2 \%$, respectively). State prevalence rates ranged threefold from $5.8 \%$ to $17.4 \%$ (median: $10.2 \%$ ), and local prevalence rates ranged more than twofold from $6.6 \%$ to $14.0 \%$ (median: 10.0\%) (Table 5).

## Engaging in a Physical Fight

Among students nationwide, $41.8 \%$ had been in a physical fight during the 12 months preceding the survey, and $4.0 \%$ had been treated by a doctor or nurse for injuries sustained in a physical fight during the same time period (Table 6). An estimated 136.8 physical fighting incidents occurred per 100 students per year. Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have been in a physical fight. Participation in a physical fight was significantly more likely to have occurred among black female students (41.8\%) than
among white female students (29.5\%) and among 9th-grade students (50.4\%) than among 10th- (42.2\%), 11th- ( $40.5 \%$ ), and 12th- $(34.8 \%)$ grade students. Black male students ( $8.5 \%$ ) were significantly more likely than black female students ( $4.3 \%$ ) and white male students (4.2\%) to have been injured in a physical fight. Among the state surveys, the prevalence rate of physical fighting ranged from $29.8 \%$ to $60.8 \%$ (median: 40.0\%), and the prevalence rate of injurious physical fighting ranged from $2.4 \%$ to $12.2 \%$ (median: $4.4 \%$ ) (Table 7). Among the local surveys, the prevalence rate of physical fighting ranged from $35.2 \%$ to $51.4 \%$ (median: $42.9 \%$ ), and the prevalence rate of injurious physical fighting ranged from $4.5 \%$ to $9.3 \%$ (median: 6.3\%).

## School-Related Violence

Nationwide, $4.4 \%$ of students had missed at least 1 day of school during the 30 days preceding the survey because they felt unsafe at school or felt unsafe traveling to or from school (Table 8). Both Hispanic and black male and female students were significantly more likely than white male and female students to miss school because they felt unsafe, and 9th-grade female students (6.4\%) were significantly more likely than 12th-grade female students (2.7\%) to miss school for this reason. Ninefold differences were observed in the prevalence rates from the state surveys, which ranged from $2.5 \%$ to $23.1 \%$ (median: $5.4 \%$ ) (Table 9). Nearly threefold differences were observed in the prevalence rates from the local surveys, which ranged from $6.8 \%$ to $17.5 \%$ (median: 10.5\%).

The prevalence of weapon-carrying on school property during the 30 days preceding the survey was $11.8 \%$ nationwide (Table 8). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have carried a weapon on school property. Black female students (11.9\%) were significantly more likely than Hispanic female ( $6.6 \%$ ) or white female (3.4\%) students to have done so. Prevalence rates among the state surveys ranged from $7.9 \%$ to $19.3 \%$ (median: $12.3 \%$ ) (Table 9). Prevalence rates among the local surveys ranged from $8.3 \%$ to $22.5 \%$ (median: 11.7\%).

Nationwide, the prevalence of students who were threatened or injured with a weapon on school property during the 12 months preceding the survey was $7.3 \%$ (Table 8). White male students (8.1\%) and black female students (9.8\%) were significantly more likely than white female students (4.4\%) to have been threatened or injured with a weapon. Male students in grades 10-12 (9.1\%, 9.5\%, and 7.6\%, respectively) were significantly more likely than female students in the same grades (5.4\%, $4.8 \%$, and $3.3 \%$, respectively) to have experienced this. Prevalence rates among the state surveys ranged from $5.8 \%$ to $15.2 \%$ (median: $8.3 \%$ ) (Table 9). Prevalence rates among the local surveys ranged from $8.9 \%$ to $16.3 \%$ (median: 10.8\%).

Nationwide, $16.2 \%$ of students had been in a physical fight on school property during the 12 months preceding the survey (Table 8). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have been in a physical fight on school property. Black male and female students ( $28.6 \%$ and $15.5 \%$, respectively) were significantly more likely than white male and female students ( $22.5 \%$ and $6.8 \%$, respectively) to have experienced this. Male and female students in grade 9 ( $33.2 \%$ and $12.7 \%$, respectively) were significantly more likely to have been in a physical fight on school property than those in grades 11 (20.0\% and $7.0 \%$, respectively) and 12 ( $16.5 \%$ and $6.1 \%$, respectively). Among the state surveys,
the prevalence rate ranged from $12.5 \%$ to $39.1 \%$ (median: $16.1 \%$ ) (Table 9). Among the local surveys, the prevalence rate ranged from $13.3 \%$ to $22.5 \%$ (median: 17.7\%).

Nationwide, approximately one third of students (32.7\%) had property (e.g., a car, clothing, or books) stolen or deliberately damaged on school property during the 12 months preceding the survey (Table 8). Across all racial/ethnic and grade subgroups (except Hispanic students), male students were significantly more likely than female students to have had property stolen or damaged. Male and female 9th-grade students ( $41.3 \%$ and $33.0 \%$, respectively) were significantly more likely than male and female 12th-grade students ( $33.2 \%$ and $24.2 \%$, respectively) to have experienced this. Prevalence rates ranged from $20.8 \%$ to $59.3 \%$ (median: $33.0 \%$ ) among the state surveys and from $23.0 \%$ to $38.7 \%$ (median: $32.5 \%$ ) among the local surveys (Table 9).

## Suicide Ideation and Attempts

Nearly one fourth (24.1\%) of students nationwide had seriously considered attempting suicide during the 12 months preceding the survey (Table 10). Across all racial/ethnic subgroups, female students were significantly more likely than male students to have considered attempting suicide. Hispanic female students (34.1\%) were significantly more likely than black and white female students ( $24.5 \%$ and $29.7 \%$, respectively) to have considered this. Prevalence rates ranged from $13.8 \%$ to $29.3 \%$ (median: 25.1\%) across the state surveys and from $18.9 \%$ to $25.7 \%$ (median: 22.7\%) across the local surveys (Table 11).

More serious suicide ideation was observed among the $19.0 \%$ of students nationwide who had made a specific plan to attempt suicide during the 12 months preceding the survey (Table 10). Across all racial/ethnic and grade subgroups (except black students and 11th-grade students), female students were significantly more likely than male students to have made such a plan. Hispanic female students ( $26.6 \%$ ) were significantly more likely than black female students (19.5\%) to have made a plan to attempt suicide. Prevalence rates among the state surveys ranged from $11.8 \%$ to 29.1\% (median: 20.3\%). Prevalence rates among the local surveys ranged from $15.0 \%$ to $22.2 \%$ (median: 17.1\%).

Nationwide, $8.6 \%$ of students had actually attempted suicide during the 12 months preceding the survey, and $2.7 \%$ reported an attempt that resulted in an injury, poisoning, or overdose that had to be treated by a doctor or nurse (Table 10). Across all racial/ethnic and grade subgroups, female students were significantly more likely than male students to have attempted suicide. Suicide attempts were significantly more likely among Hispanic male students (7.4\%) than among white male students (4.4\%) and among Hispanic female students (19.7\%) than among white and black female students ( $11.3 \%$ and $11.2 \%$, respectively). The percentage of students attempting suicide ranged from $7.8 \%$ to $26.3 \%$ (median: $10.2 \%$ ) across the state surveys and from $9.6 \%$ to $13.5 \%$ (median: 10.8\%) across the local surveys (Table 11). Across all racial/ethnic and grade subgroups (except black students and students in grades 9 and 12), female students were significantly more likely than male students to have made a suicide attempt that required subsequent medical attention (Table 10). The prevalence of injurious suicide attempts ranged from $1.9 \%$ to $9.4 \%$ (median: $3.1 \%$ ) across the state surveys and from $2.3 \%$ to $4.7 \%$ (median: $3.6 \%$ ) across the local surveys (Table 11).

## Tobacco Use

## Cigarette Use

Nationwide, $69.5 \%$ of students had ever tried cigarette smoking (Table 12). Students in grades 11 and 12 ( $73.3 \%$ and $73.9 \%$, respectively) were significantly more likely than students in grades 9 and 10 ( $62.8 \%$ and $66.9 \%$, respectively) to have done so. Prevalence rates among the state surveys ranged from $46.4 \%$ to $76.8 \%$ (median: 69.4\%); among the local surveys, prevalence rates ranged from $59.3 \%$ to 69.7\% (median: 64.7\%) (Table 13).

Nearly one third of students ( $30.5 \%$ ) nationwide had smoked cigarettes on $\geq 1$ of the 30 days preceding the survey (i.e., current cigarette use) (Table 12). White and Hispanic male and female students were significantly more likely than black male and female students to report current cigarette use. Prevalence rates among the state surveys ranged from $17.4 \%$ to $38.9 \%$ (median: $30.9 \%$ ); among the local surveys, prevalence rates ranged from $12.9 \%$ to $25.9 \%$ (median: 20.1\%) (Table 13).

Nationwide, $13.8 \%$ of students had smoked cigarettes on $\geq 20$ of the 30 days preceding the survey (i.e., frequent cigarette use) (Table 12). White students ( $16.1 \%$ ) were significantly more likely than Hispanic and black students ( $7.7 \%$ and $4.6 \%$, respectively) to report frequent cigarette use. Students in grades 11 and 12 ( $15.3 \%$ and $17.8 \%$, respectively) were significantly more likely than students in grade 9 ( $8.8 \%$ ) to do so. Prevalence rates among the state surveys ranged from $8.2 \%$ to $19.9 \%$ (median: $14.1 \%$ ); among the local surveys, prevalence rates ranged from $3.0 \%$ to $10.5 \%$ (median: 6.1\%) (Table 13).

Nearly one fourth (24.7\%) of high school students had ever smoked at least one cigarette every day for 30 days (i.e., regular cigarette use) (Table 12). White students ( $28.4 \%$ ) were significantly more likely than Hispanic and black students ( $18.6 \%$ and $9.2 \%$, respectively) to report regular cigarette use, and Hispanic students were significantly more likely than black students to report regular cigarette use. Students in grades 11 and 12 ( $27.2 \%$ and $28.4 \%$, respectively) were significantly more likely than students in grade 9 (20.9\%) to have done so. A tenfold variation was observed in prevalence rates across state surveys, which ranged from $3.1 \%$ to $32.4 \%$ (median: $24.7 \%$ ). Prevalence rates among the local surveys ranged from $7.2 \%$ to $18.8 \%$ (median: 15.1\%) (Table 13).

## Smokeless Tobacco Use

Nationwide, more than one in 10 students (11.5\%) had used smokeless tobacco during the 30 days preceding the survey (Table 12). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to use smokeless tobacco. White male students ( $26.0 \%$ ) were significantly more likely than Hispanic or black male students ( $8.0 \%$ and $4.7 \%$, respectively) to do so. A twelvefold variation in prevalence rates was observed across the state surveys, which ranged from $1.8 \%$ to $24.0 \%$ (median: $11.9 \%$ ) (Table 13). A fourfold variation was observed across the local surveys, which ranged from 1.5\% to 8.4\% (median: 2.8\%).

## Alcohol and Other Drug Use

## Alcohol Use

Nationwide, 80.9\% of students had had at least one drink of alcohol during their lifetime (Table 14). Students in grades 11 and 12 ( $84.9 \%$ and $87.6 \%$, respectively) were significantly more likely than students in grades 9 and 10 ( $72.9 \%$ and $76.8 \%$, respectively) to have had at least one drink of alcohol. The prevalence of alcohol use across the state surveys ranged from $45.7 \%$ to $86.1 \%$ (median: 77.6\%) (Table 15). The range across the local surveys was $60.5 \%$ to $79.0 \%$ (median: $73.4 \%$ ).

Nationwide, nearly half of all students (48.0\%) had had at least one drink of alcohol during the 30 days preceding the survey (i.e., current alcohol use) (Table 14). This behavior was significantly more likely among black male students (48.2\%) than among black female students (37.1\%) and among male students in grade 12 ( $60.5 \%$ ) than among female students in grade 12 ( $52.0 \%$ ). White female students ( $48.6 \%$ ) were significantly more likely than black female students ( $37.1 \%$ ) to report current alcohol use, as were male students in grades 11 and 12 ( $53.6 \%$ and $60.5 \%$, respectively) compared with male students in grade 9 ( $40.2 \%$ ). Female students in grade 12 ( $52.0 \%$ ) were significantly more likely to engage in this behavior than female students in grade 9 ( $40.5 \%$ ). Prevalence rates across the state surveys ranged from $26.0 \%$ to $61.2 \%$ (median: $47.3 \%$ ), and across the local surveys, from $32.9 \%$ to $46.4 \%$ (median: 41.4\%).

Nationwide, $30.0 \%$ of students had had five or more drinks of alcohol on at least one occasion during the 30 days preceding the survey (i.e., episodic heavy drinking) (Table 14). Across all racial/ethnic and grade subgroups (except 9th- and 10th-grade students), male students were significantly more likely than female students to report episodic heavy drinking. This behavior was significantly more common among white and Hispanic male ( $35.6 \%$ and $39.4 \%$, respectively) and female ( $29.3 \%$ and $27.6 \%$, respectively) students than among black male ( $25.1 \%$ ) and female ( $13.3 \%$ ) students; this behavior also was more common among male students in grades 11 and 12 (37.1\% and $45.0 \%$, respectively) than among those in grades 9 and 10 ( $24.0 \%$ and $27.2 \%$, respectively). Female students in grade 12 ( $33.0 \%$ ) were significantly more likely than female students in grades $9-11$ ( $19.7 \%, 25.3 \%$, and $25.1 \%$, respectively) to report episodic heavy drinking. A more than fourfold variation was observed in prevalence rates across the state surveys, which ranged from $9.3 \%$ to $44.3 \%$ (median: 28.8\%) (Table 15). Across the local surveys, prevalence rates ranged from $14.1 \%$ to $24.7 \%$ (median: 19.4\%).

## Marijuana Use

Nearly one third (32.8\%) of students nationwide had used marijuana during their lifetime, and $17.7 \%$ had used marijuana at least once during the 30 days preceding the survey (i.e., current marijuana use) (Table 14). Black male students were significantly more likely than black female students to report lifetime ( $41.1 \%$ and $26.3 \%$, respectively) and current marijuana use ( $24.3 \%$ and $13.0 \%$, respectively). Hispanic male students (41.5\%) were significantly more likely than Hispanic female students (29.5\%) to report lifetime marijuana use. Lifetime and current use was significantly more likely among male and female students in grade 12 than among male and female students in grade 9 . Male students in grade 9 were significantly more likely than female students in the same grade to report lifetime ( $28.8 \%$ and $19.7 \%$, respectively) and current ( $16.3 \%$ and $9.7 \%$, respectively) marijuana use. Male students in grade 12 ( $45.5 \%$ ) were
significantly more likely than female students in the same grade (35.8\%) to report lifetime marijuana use. Lifetime marijuana use ranged from $16.3 \%$ to $40.0 \%$ (median: $27.9 \%$ ) across the state surveys and from $23.8 \%$ to $40.5 \%$ (median: $29.5 \%$ ) across the local surveys (Table 15). Current marijuana use ranged from $7.4 \%$ to $22.0 \%$ (median: $14.1 \%$ ) across the state surveys and from $11.8 \%$ to $22.7 \%$ (median: $17.8 \%$ ) across the local surveys.

## Cocaine Use

Nationwide, $4.9 \%$ of students had used cocaine during their lifetime, and $1.9 \%$ had used cocaine at least once during the 30 days preceding the survey (i.e., current cocaine use) (Table 16). Hispanic male and female students were significantly more likely than white and black male and female students to report lifetime and current cocaine use. White male and female students ( $5.3 \%$ and $3.9 \%$, respectively) were significantly more likely than black male and female students ( $1.9 \%$ and $1.2 \%$, respectively) to report lifetime cocaine use. A fourfold variation in lifetime and current cocaine use was observed across the state and local surveys (Table 17). Lifetime cocaine use ranged from $2.0 \%$ to $9.7 \%$ (median: $5.1 \%$ ) among the state surveys and from $1.4 \%$ to $8.8 \%$ (median: $3.8 \%$ ) among the local surveys. Current cocaine use ranged from $0.7 \%$ to $4.4 \%$ (median: $2.2 \%$ ) among the state surveys and from $0.4 \%$ to $4.3 \%$ (median: $1.9 \%$ ) among the local surveys.

Nationwide, $2.6 \%$ of students had used crack or freebase forms of cocaine during their lifetime (Table 16). Hispanic male (7.1\%) and female ( $5.5 \%$ ) students were significantly more likely than white and black male ( $2.6 \%$ and $1.6 \%$, respectively) and female ( $2.0 \%$ and $0.6 \%$, respectively) students to have used these drugs. A fivefold variation in crack or freebase use was observed across the state surveys, which ranged from $1.1 \%$ to $5.6 \%$ (median: $3.4 \%$ ); a sevenfold variation was observed across the local surveys, which ranged from $0.7 \%$ to $5.0 \%$ (median: 2.0\%) (Table 17).

## Steroid Use

Nationwide, $2.2 \%$ of students had used steroids without a doctor's prescription during their lifetime (Table 16). White and black male students and male students in grades 11 and 12 were significantly more likely than female students in the same subgroups to have used steroids. Lifetime steroid use ranged from $1.8 \%$ to $5.4 \%$ (median: $3.5 \%$ ) across the state surveys and from $1.6 \%$ to $3.8 \%$ (median: $2.8 \%$ ) across the local surveys (Table 17).

## Injected-Drug Use (IDU)

Nationwide, $1.4 \%$ of students had injected illegal drugs during their lifetime* (Table 16). White male students ( $1.8 \%$ ) and male students in grade 12 ( $1.9 \%$ ) were significantly more likely than white female students (0.7\%) and female students in grade $12(0.4 \%)$ to have reported IDU. Prevalence rates for IDU ranged from $1.0 \%$ to $3.8 \%$ (median: 2.2\%) across the state surveys and from $0.5 \%$ to $2.6 \%$ (median: 1.5\%) across the local surveys (Table 17).

[^4]
## Tobacco, Alcohol, and Other Drug Use on School Property

Nationwide, 13.2\% of students had smoked cigarettes on school property during the 30 days preceding the survey (Table 18). White and Hispanic students ( $14.6 \%$ and $11.1 \%$, respectively) were significantly more likely than black students ( $5.9 \%$ ) to have done so. Across the state surveys, $8.2 \%-19.9 \%$ (median: 13.5\%) of students had smoked cigarettes on school property (Table 19). Across the local surveys, the prevalence rates ranged from $4.0 \%$ to $17.0 \%$ (median: $9.7 \%$ ).

Smokeless tobacco use on school property during the 30 days preceding the survey was reported by $6.8 \%$ of students nationwide (Table 18). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have used smokeless tobacco on school property. White male students ( $16.0 \%$ ) were significantly more likely to have engaged in this behavior than black and Hispanic male students ( $2.8 \%$ and $4.4 \%$, respectively). A fourfold variation was observed across the state surveys, which ranged from $3.8 \%$ to $16.2 \%$ (median: 7.4\%) (Table 19). A threefold variation was observed across the local surveys, which ranged from $0.7 \%$ to $2.6 \%$ (median: 1.1\%).

Nationwide, $5.2 \%$ of students had had at least one drink of alcohol on school property during the 30 days preceding the survey (Table 18). Male students in grade 12 ( $7.5 \%$ ) were significantly more likely than female students in the same grade (3.5\%) to have engaged in this behavior. Prevalence rates across the state surveys ranged from $4.1 \%$ to $12.3 \%$ (median: 6.2\%) and across the local surveys from $4.1 \%$ to $12.2 \%$ (median: 6.2\%) (Table 19).

Nationwide, $5.6 \%$ of students had used marijuana on school property during the 30 days preceding the survey (Table 18). Across all racial/ethnic subgroups, male students were significantly more likely than female students to have engaged in this behavior. Prevalence rates ranged from $1.8 \%$ to $8.1 \%$ (median: $4.5 \%$ ) across the state surveys and from $4.6 \%$ to $9.3 \%$ (median: $5.8 \%$ ) across the local surveys (Table 19).

Nearly one fourth (24.0\%) of students had been offered, sold, or given an illegal drug on school property during the 12 months preceding the survey (Table 18). Among white and Hispanic students, male students were significantly more likely than female students to have been offered, sold, or given an illegal drug. Hispanic male and female students were significantly more likely than white and black male and female students to have experienced this. Prevalence rates across the state surveys ranged from $11.0 \%$ to $31.4 \%$ (median: $22.0 \%$ ) and across the local surveys from $12.8 \%$ to $36.7 \%$ (median: 21.3\%) (Table 19).

## Sexual Behaviors that Contribute to Unintended Pregnancy and STD

## Sexual Intercourse

Nationwide, more than half (53.0\%) of all students had had sexual intercourse during their lifetime (Table 20). Black, Hispanic, and 9th-grade male students were significantly more likely than female students in the same subgroups to have done so. Black male and female students ( $89.2 \%$ and $70.4 \%$, respectively) were significantly more likely than white male and female students ( $49.3 \%$ and $47.4 \%$, respectively) and Hispanic male and female ( $63.5 \%$ and $48.3 \%$ ) students to have had sexual intercourse, and Hispanic male students ( $63.5 \%$ ) were significantly more likely than white male students (49.3\%) to have done so. Among female students, the prevalence rates increased significantly from grades $9-12$; among male students the prevalence rates
increased significantly from grades 10-12. Prevalence rates ranged from $43.0 \%$ to $69.0 \%$ (median: $54.5 \%$ ) across the state surveys and from $39.6 \%$ to $79.2 \%$ (median: $60.6 \%$ ) across the local surveys (Table 21).

The percentage of students nationwide who had had sexual intercourse during their lifetime with four or more sex partners was $18.8 \%$ (Table 20). Black and Hispanic male students and 9th- and 10th-grade male students were significantly more likely to have had four or more sex partners than were female students in the same subgroups. This behavior was significantly more likely among black male and female students ( $58.8 \%$ and $27.2 \%$, respectively) than among Hispanic male and female students ( $26.3 \%$ and $11.0 \%$, respectively) and white male and female students ( $15.2 \%$ and $13.3 \%$ ). This behavior also was significantly more likely among male and female students in grades 11 ( $23.1 \%$ and $16.3 \%$, respectively) and 12 ( $30.7 \%$ and $23.2 \%$, respectively) than among male and female students in grades 9 ( $15.4 \%$ and $6.2 \%$, respectively) and 10 ( $18.9 \%$ and $12.8 \%$, respectively). Prevalence rates across the state surveys ranged from $11.4 \%$ to $30.1 \%$ (median: $19.3 \%$ ) and across the local surveys from $14.8 \%$ to $45.3 \%$ (median: 25.9\%) (Table 21).

More than one third ( $37.6 \%$ ) of students nationwide had had sexual intercourse during the 3 months preceding the survey (i.e., current sexual activity) (Table 20). Black male students ( $65.1 \%$ ) were significantly more likely than black female students ( $53.2 \%$ ) to be currently sexually active. This behavior was significantly more likely among black male and female students ( $65.1 \%$ and $53.2 \%$, respectively) than among white male and female students ( $32.9 \%$ and $35.2 \%$, respectively) and Hispanic male and female students ( $40.7 \%$ and $37.9 \%$, respectively); current sexual activity also was significantly more likely among male and female students in grade 12 than among male and female students in grades 9-11. Prevalence rates among the state surveys ranged from $28.5 \%$ to $50.6 \%$ (median: $38.4 \%$ ) (Table 21). Prevalence rates among the local surveys ranged from $28.5 \%$ to $61.2 \%$ (median: 42.0\%).

## Condom Use

Among currently sexually active students nationwide, $52.8 \%$ reported that they or their partner had used a condom during last sexual intercourse (Table 20). Across all racial/ethnic and grade subgroups (except 9th-grade students), male students were significantly more likely than female students to have reported that a condom was used. White and black female students ( $46.1 \%$ and $47.8 \%$, respectively) were significantly more likely than Hispanic female students (36.9\%) to have reported condom use. This behavior was reported significantly more often by female students in grade 9 (59.2\%) than by female students in grade 12 (41.2\%) and by male students in grade 11 ( $64.8 \%$ ) than by male students in grade 12 ( $51.5 \%$ ). Prevalence rates across the state surveys ranged from $27.6 \%$ to $59.6 \%$ (median: $52.0 \%$ ) and across the local surveys from $47.4 \%$ to $65.0 \%$ (median: 59.8\%) (Table 21).

## Birth Control Pill Use

Among sexually active students nationwide, 18.4\% reported that they or their partner had used birth control pills during last sexual intercourse (Table 20). Black female students (20.6\%) were significantly more likely than black male students (10.5\%) to have reported use of birth control pills. This behavior was significantly more likely to have been reported by white female students (24.0\%) than by Hispanic female students ( $15.3 \%$ ) and by male and female students in grade 12 than by male students in
grades 9-11 and female students in grades 9-10. A sixfold variation in prevalence rates was observed across the state surveys, which ranged from $4.8 \%$ to $31.3 \%$ (median: $17.9 \%$ ) (Table 21). More than a twofold variation was observed across the local surveys, which ranged from $7.8 \%$ to $18.8 \%$ (median: $11.5 \%$ ).

## Dietary Behaviors

## Perceived Overweight

One third (34.3\%) of all students nationwide thought they were overweight (Table 22). Across all racial/ethnic and grade subgroups, female students were significantly more likely than male students to identify themselves as being overweight. White and Hispanic female students ( $47.5 \%$ and $45.4 \%$, respectively) were significantly more likely than black female students ( $32.2 \%$ ) to consider themselves overweight. Hispanic male students $(32.0 \%)$ were significantly more likely than white and black male students ( $23.9 \%$ and $20.8 \%$, respectively) to identify themselves as being overweight. Prevalence rates across the state surveys ranged from $21.7 \%$ to $40.8 \%$ (median: $33.4 \%$ ) and across the local surveys from $22.0 \%$ to $32.5 \%$ (median: 28.1\%) (Table 23).

## Attempted Weight Loss

Nationwide, $40.3 \%$ of students were attempting weight loss (Table 22). Across all racial/ethnic and grade subgroups, female students were significantly more likely than male students to have been attempting to lose weight. Attempted weight loss was significantly more likely among white and Hispanic female students (61.3\% and 61.4\%, respectively) than among black female students (44.0\%). Hispanic male students (32.8\%) were significantly more likely than white and black male students ( $22.3 \%$ and 19.9\%, respectively) to have been trying to lose weight. Prevalence rates ranged from $28.7 \%$ to $47.3 \%$ (median: 41.5\%) across the state surveys and from $28.5 \%$ to $40.5 \%$ (median: $36.4 \%$ ) across the local surveys (Table 23).

## Fruits and Vegetables

Nationwide, $15.4 \%$ of students had eaten five or more servings of fruits and vegetables* during the day preceding the survey (Table 22). White male and 9th-grade male students ( $18.4 \%$ and $20.8 \%$, respectively) were significantly more likely to have eaten five or more servings than were white female and 9th-grade female students ( $13.5 \%$ and $15.5 \%$, respectively), and white male and female students ( $18.4 \%$ and $13.5 \%$, respectively) were significantly more likely than black male and female students ( $11.0 \%$ and $7.2 \%$, respectively) to have done so. Prevalence rates across the state surveys ranged from $7.6 \%$ to $21.4 \%$ (median: $14.6 \%$ ) and across the local surveys from $10.0 \%$ to $21.2 \%$ (median: 12.5\%) (Table 23).

## Foods Typically High in Fat Content

Two thirds (66.2\%) of students nationwide had eaten two or fewer servings of foods typically high in fat content ${ }^{\dagger}$ during the day preceding the survey (Table 22). Across all racial/ethnic and grade subgroups, female students were significantly more likely than male students to have eaten two or fewer servings of such foods. White and Hispanic female students ( $77.1 \%$ and $79.0 \%$, respectively) were significantly more likely to have

[^5]done so than were black female students (63.2\%), and Hispanic male students (66.2\%) were significantly more likely than white and black male students ( $56.4 \%$ and $54.5 \%$, respectively) to have done so. Across the state surveys, prevalence rates ranged from $58.4 \%$ to $89.9 \%$ (median: $63.2 \%$ ), and across the local surveys, the prevalence rates ranged from $56.9 \%$ to $77.0 \%$ (median: 69.5\%) (Table 23).

## Physical Activity

## Vigorous Physical Activity

Nearly two thirds ( $65.8 \%$ ) of students nationwide had participated in activities that made them sweat and breathe hard for at least 20 minutes on $\geq 3$ of the 7 days preceding the survey (i.e., vigorous physical activity) (Table 24). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to report vigorous physical activity. Vigorous physical activity was significantly more likely among white female students ( $58.8 \%$ ) than among black or Hispanic female students ( $48.8 \%$ and $50.0 \%$, respectively), and significantly more likely among male and female students in grade 9 ( $81.2 \%$ and $67.5 \%$, respectively) than among those in grades 11 ( $71.4 \%$ and $52.7 \%$, respectively) and 12 ( $69.8 \%$ and $45.4 \%$, respectively). Prevalence rates of vigorous physical activity ranged from $51.7 \%$ to $73.3 \%$ (median: $64.4 \%$ ) across the state surveys and from $44.8 \%$ to $68.6 \%$ (median: $57.0 \%$ ) across the local surveys (Table 25).

## Stretching Exercises

Nationwide, $54.5 \%$ of students had done stretching exercises (e.g., toe touching, knee bending, and leg stretching) on $\geq 3$ of the 7 days preceding the survey (Table 24). White female students ( $55.6 \%$ ) were significantly more likely than black and Hispanic female students ( $43.2 \%$ and $46.8 \%$, respectively) to have done stretching exercises. Male and female students in grade 9 ( $62.9 \%$ and $65.9 \%$, respectively) were significantly more likely than those in grades 11 ( $53.3 \%$ and $48.4 \%$, respectively) and 12 ( $52.6 \%$ and $41.1 \%$, respectively) to have done so. Across the state surveys, prevalence rates ranged from $23.7 \%$ to $48.8 \%$ (median: $39.7 \%$ ); across the local surveys, prevalence rates ranged from $24.8 \%$ to $51.6 \%$ (median: 33.8\%) (Table 25).

## Strengthening Exercises

Approximately half (51.9\%) of students nationwide had done strengthening exercises (e.g., push-ups, sit-ups, and weight lifting) on $\geq 3$ of the 7 days preceding the survey (Table 24). Across all racial/ethnic and grade subgroups, male students were significantly more likely than female students to have done strengthening exercises. This activity was significantly more frequent among white female students (44.0\%) than among black female students ( $33.3 \%$ ) and among male and female students in grade $9(69.1 \%$ and $52.2 \%$, respectively) than among those in grades 11 (58.5\% and $37.5 \%$, respectively) and 12 ( $54.7 \%$ and $34.3 \%$, respectively). Prevalence rates ranged from $21.8 \%$ to $43.6 \%$ (median: $35.7 \%$ ) across the state surveys and from $25.0 \%$ to 38.4\% (median: 31.2\%) across the local surveys (Table 25).

## Participation in Physical Education (PE) Class

Nationwide, about half (52.1\%) of students were enrolled in a PE class (Table 24). Black male students ( $62.8 \%$ ) were significantly more likely than black female students
(48.7\%) to have been enrolled in a PE class. Enrollment in a PE class was significantly more likely among male and female students in grade 9 than among those in grades 10-12. The percentage of students enrolled in PE ranged from $21.6 \%$ to $94.9 \%$ (median: 52.4\%) across the state surveys and from $37.4 \%$ to $92.6 \%$ (median: 58.5\%) across the local surveys (Table 25).

Approximately one third (34.3\%) of students nationwide had attended PE daily (Table 24). Black male students (48.6\%) were significantly more likely than white male students ( $34.8 \%$ ) to have attended PE daily, and male and female students in grades 9 ( $52.7 \%$ and $52.7 \%$, respectively) and 10 ( $43.6 \%$ and $35.9 \%$, respectively) were significantly more likely than those in grades 11 ( $26.7 \%$ and $20.9 \%$, respectively) and 12 ( $28.4 \%$ and $17.1 \%$, respectively) to have attended PE daily. Wide variation was observed across the state surveys, where prevalence rates ranged from $9.5 \%$ to $69.4 \%$ (median: $35.7 \%$ ), and across the local surveys, where prevalence rates ranged from $9.8 \%$ to $80.5 \%$ (median: 39.8\%) (Table 25).

## DISCUSSION

These results indicate that many high school students throughout the United States practice behaviors that place them at risk for serious health problems. Considerable variation occurs from state to state and from city to city for some priority health risk behaviors. For example, among the state surveys, a fivefold variation or greater was identified for not using safety belts, not attending school because of concerns about safety, injurious physical fighting, injurious suicide attempts, regular cigarette smoking, smokeless tobacco use, current cocaine use, birth control pill use, and not attending PE class daily. Among the local surveys, a similar level of variation was found for safety belt use, lifetime cocaine use, current cocaine use, lifetime crack use, and daily attendance in a PE class. This variation may be attributable to differences in state and local laws and policies, enforcement practices, access to illegal drugs, available intervention programs, and prevailing norms and practices. For example, among the states, the percentage of students who attended PE class daily ranged from $9.5 \%$ in New York to $69.4 \%$ in Illinois, where high school students are required by state mandate to attend a PE class daily; among the cities, such attendance ranged from $9.8 \%$ in Boston to $80.5 \%$ in Chicago.

The median prevalence rates for the state surveys and for the local surveys were similar for all categories of behavior except for tobacco use. Whereas the median prevalence rates for having ever tried cigarette smoking were similar for both types of surveys ( $69.4 \%$ vs. $64.7 \%$, respectively), the median prevalence rates for all other tobacco-related behaviors (i.e., current, frequent, and regular cigarette use and smokeless tobacco use) were significantly higher in the state surveys than in the local surveys. These findings suggest that although high school students throughout the nation try cigarette smoking at similar rates, those living in larger cities are apparently less likely to continue use than are their peers who live in smaller cities and towns.

These data, which include the differences between subgroups, are consistent with results from other national school-based surveys (6-8). In general, male students were most likely to report injury-related behaviors, smokeless tobacco use, and various types of drug use (e.g., binge drinking, marijuana use, steroid use, and IDU) and female students were most likely to report suicide-related behaviors and weight loss attempts. White students were most likely to report tobacco use and some types of
physical activity (vigorous physical activity and strengthening exercises); black students were most likely to report weapon-carrying, physical fighting, and sexual behaviors; and Hispanic students were most likely to report current alcohol use, binge drinking, and cocaine and crack use. Weapon-carrying, physical fighting, condom use, and participation in physical activities occurred most frequently among students in grades 9-10, whereas cigarette smoking, alcohol and marijuana use, and sexual behaviors (except condom use) occurred most frequently among students in grades 11-12. These sex, grade, and race/ethnicity findings can assist in identifying groups with higher prevalences of risk behaviors. However, the underlying causes (e.g., education levels, economic factors, or cultural influences) for within-subgroup differences could not be addressed in this analysis.

The YRBSS is the first school-based surveillance system to monitor priority health risk behaviors among representative samples of students at the national, state, and local levels. Since the system was implemented in 1990, the number of participating states and cities has increased by $44 \%$. YRBSS data increasingly are being used by health and education officials to improve school health policies and programs. For example, in Massachusetts, YRBSS data were used to support the passage of a new excise tax on tobacco products. The increased revenue is being provided to local schools to support health education programs. In San Diego, YRBSS data are being used to develop a countywide strategic plan for child and adolescent health care. Once the plan is implemented, YRBSS data will be used to help monitor program impact. In South Dakota, YRBSS updates are provided annually to the state legislature to help establish priorities for relevant legislation. In New Mexico, YRBSS results have been distributed to every school district in the state to help districts develop or select programs to best meet student needs. At the national level, YRBSS data are being used to measure progress toward achieving 26 national health objectives (9). YRBSS data also are being used to measure one of the eight National Education Goals, which states, "By the year 2000, every school in the U.S. will be free of drugs, violence, and the unauthorized presence of firearms and alcohol and will offer a disciplined environment conducive to learning," (10).

New components are being added to the YRBSS to help monitor both youth who do not attend school and youth who attend college. In 1992, a national householdbased survey of persons 12-21 years of age was conducted as part of CDC's National Health Interview Survey (11,12). Because youth who were not attending school were oversampled, the health risk behaviors practiced by this group nationwide could be systematically examined for the first time. A national survey of undergraduate college students is being conducted during Spring 1995. These new components of the YRBSS will provide the additional data needed for prevention programs to address these other groups of adolescents and young adults.

* One or more times during the 12 months preceding the survey.
${ }^{\dagger}$ Students who were injured seriously enough to be treated by a doctor or nurse.
${ }^{\S}$ Students who reported fighting two or three times were assigned a fighting frequency of 2.5 ; four or five times, 4.5 ; six or seven times, 6.5 ; eight or nine times, $8.5 ; 10$ or 11 times, 10.5 ; and $\geq 12$ times, 12.0 .
$\uparrow$ U.S. territories are included as states.
** Survey did not include students from the state's largest city.
$\dagger \dagger$ Not available.

*Ever tried any form of cocaine, including powder, crack, or freebase.
${ }^{\dagger}$ Used cocaine one or more times during the 30 days preceding the survey.
${ }^{\S}$ Ever used crack or freebase.
IEver used illegal steroids.
** Ever injected illegal drugs. Respondents were classified as injecting-drug users only if they a) reported injecting-drug use not prescribed by a physician and b) answered "one or more" to any of these questions: "During your life, how many times have you used any form of cocaine including powder, crack, or freebase?"; "During your life, how many times have you used any other type of illegal drugs such as LSD, PCP, ecstacy, mushrooms, speed, ice, heroin, or pills without a doctor's prescription?"; or "During your life, how many times have you taken steroid pills or shots without a doctor's prescription?"
${ }^{\dagger \dagger}$ Ninety-five percent confidence interval.

* Sexual intercourse during the 3 months preceding the survey.
${ }^{\dagger}$ Among currently sexually active students.
${ }^{\S}$ Not available.
$\llbracket$ U.S. territories are included as states.
** Survey did not include students from the state's largest city.

TABLE 22. Percentage of high school students who thought they were overweight, were attempting weight loss, ate five or more servings of fruits and vegetables, and ate no more than two servings of foods typically high in fat content during the day preceding the survey,* by sex, race/ethnicity, and grade - United States, Youth Risk Behavior Survey, 1993

*Students who replied that they did not consume a particular type of food were assigned a frequency of 0; students who replied that they consumed a particular type of food "once only" were assigned a frequency of 1.0; and students who replied that they consumed a particular type of food "twice or more" were assigned a frequency of 2.0. The number of servings of fruits and vegetables ranged from 0 through 8. The number of servings of food typically high in fat content ranged from 0 through 6.
${ }^{\dagger}$ Fruit, fruit juice, green salad, and cooked vegetables.
${ }^{\S}$ Hamburgers, hot dogs, or sausage; french fries or potato chips; and cookies, doughnuts, pie, or cake.
$\uparrow$ Ninety-five percent confidence interval.

* Students who replied that they did not consume a particular type of food were assigned a frequency of 0; students who replied that they consumed a particular type of food "once only" were assigned a frequency of 1.0; and students who replied that they consumed a particular type of food "twice or more" were assigned a frequency of 2.0. The number of servings of fruits and vegetables ranged from 0 through 8 . The number of servings of foods typically high in fat content ranged from 0 through 6.
$\dagger$ Fruit, fruit juice, green salad, and cooked vegetables.
${ }^{\S}$ Hamburgers, hot dogs, or sausage; french fries or potato chips; and doughnuts, pie, or cake.
$\llbracket$ U.S. territories are included as states.
** Survey did not include students from the state's largest city.
${ }^{\dagger \dagger}$ Not available.

TABLE 24. Percentage of high school students who participated in vigorous physical activity,* stretching exercises, ${ }^{\dagger}$ and strengthening exercises, ${ }^{\S}$ and who were enrolled in physical education (PE) class and attended PE class daily, by sex, race/ethnicity, and grade - United States, Youth Risk Behavior Survey, 1993

| Category | Participated in vigorous physical activity |  |  | Participated in stretching exercises |  |  | Participated in strengthening exercises |  |  | Enrolled in PE |  |  | Attended PE daily |  |  |

## State and Territorial Epidemiologists and Laboratory Directors

State and Territorial Epidemiologists and Laboratory Directors are acknowledged for their contributions to CDC Surveillance Summaries. The epidemiologists listed below were in the positions shown as of January 1995, and the laboratory directors listed below were in the positions shown as of February 1995.

| State/Territory | Epidemiologist |
| :---: | :---: |
| Alabama | Charles H. Woernle, MD, MPH |
| Alaska | John P. Middaugh, MD |
| Arizona | Lawrence Sands, DO, MPH |
| Arkansas | Thomas C. McChesney, DVM |
| California | George W. Rutherford, III, MD |
| Colorado | Richard E. Hoffman, MD, MPH |
| Connecticut | James L. Hadler, MD, MPH |
| Delaware | A. LeRoy Hathcock, Jr, PhD |
| District of Columbia | Martin E. Levy, MD, MPH |
| Florida | Richard S. Hopkins, MD, MSPH |
| Georgia | Kathleen E. Toomey, MD, MPH |
| Hawaii | Richard L. Vogt, MD |

## MMWR

The Morbidity and Mortality Weekly Report (MMWR) Series is prepared by the Centers for Disease Control and Prevention (CDC). The data in the weekly MMWR are provisional, based on weekly reports to CDC by state health departments. The reporting week concludes at close of business each Friday; compiled data on a national basis are officially released to the public the following Friday. Inquiries about the MMWR Series and material to be considered for publication should be addressed to Editor, MMWR Series, Mailstop C-08, CDC, 1600 Clifton Road, N.E., Atlanta, GA 30333; telephone (404) 332-4555.

The MMWR is available on a paid subscription basis for paper copy and free of charge in electronic format. For information about paid subscriptions, contact the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402; telephone (202) 783-3238. For electronic copy, send an e-mail message to lists@list.cdc.gov - the body content should read subscribe mmwr-toc. Electronic copy also is available from CDC's World-Wide Web server at http://www.cdc.gov/ or CDC's file transfer protocol server at ftp.cdc.gov.

All material in the MMWR Series is in the public domain and may be used and reprinted without permission; citation of source, however, is appreciated.
\#U.S. Government Printing Office: 1995-633-175/05059 Region IV

[^0]:    Copies can be purchased from Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402-9325. Telephone: (202) 783-3238.

[^1]:    *U.S. territories are included as states.
    ${ }^{\dagger}$ The school-based components of the YRBSS were implemented in 1990 and 1991 and then biennially during odd-numbered years thereafter.

[^2]:    *In this report, black refers to black, non-Hispanic students.

[^3]:    *In this report, white refers to white, non-Hispanic students.

[^4]:    *Students were classified as injecting-drug users only if they a) reported injecting-drug use not prescribed by a physician and b) answered "one or more" to any of these questions: "During your life, how many times have you used any form of cocaine including powder, crack, or freebase?"; "During your life, how many times have you used any other type of illegal drug such as LSD, PCP, ecstacy, mushrooms, speed, ice, heroin, or pills without a doctor's prescription?"; or "During your life, how many times have you taken steroid pills or shots without a doctor's prescription?"

[^5]:    *Fruit, fruit juice, green salad, and cooked vegetables.
    ${ }^{\dagger}$ Hamburgers, hot dogs, or sausage; french fries or potato chips; and cookies, doughnuts, pie, or cake.

[^6]:    *When riding in a car or truck driven by someone else.
    ${ }^{\dagger}$ Among students who rode motorcycles during the 12 months preceding the survey.
    §Among students who rode bicycles during the 12 months preceding the survey.
    One or more times during the 30 days preceding the survey.
    ** Ninety-five percent confidence interval.

[^7]:    *When riding in a car or truck driven by someone else.
    ${ }^{\dagger}$ Among students who rode motorcycles during the 12 months preceding the survey.
    ${ }^{\S}$ Among students who rode bicycles during the 12 months preceding the survey.
    ${ }^{1}$ One or more times during the 30 days preceding the survey.
    ** U.S. territories are included as states.
    ${ }^{\text {t† }}$ Survey did not include students from the state's largest city.
    §§ Not available.

[^8]:    *Such as a gun, knife, or club on $\geq 1$ of the 30 days preceding the survey.
    ${ }^{\dagger}$ On $\geq 1$ of the 30 days preceding the survey.
    ${ }^{\S}$ Students who replied that they carried a weapon 2 or 3 days were assigned a weapon-carrying frequency of 2.5 ; 4 or 5 days, 4.5 ; and $\geq 6$ days, 6.0.
    $\uparrow$ Ninety-five percent confidence interval.

[^9]:    ${ }^{*}$ On $\geq 1$ of the 30 days preceding the survey.
    ${ }^{\dagger}$ Such as a gun, knife, or club.
    § One or more times during the 12 months preceding the survey.
    $\uparrow$ Ninety-five percent confidence interval.

[^10]:    * On $\geq 1$ of the 30 days preceding the survey.
    ${ }^{\dagger}$ Such as a gun, knife, or club.

[^11]:    *During the 12 months preceding the survey.
    ${ }^{\dagger}$ One or more times.
    ${ }^{\S}$ Ninety-five percent confidence interval.

[^12]:    *During the 12 months preceding the survey.
    ${ }^{\dagger}$ One or more times.

[^13]:    * Ever tried cigarette smoking, even one or two puffs.
    ${ }^{\dagger}$ Smoked cigarettes on $\geq 1$ of the 30 days preceding the survey.
    § Smoked cigarettes on $\geq 20$ of the 30 days preceding the survey.
    I Ever smoked at least one cigarette every day for 30 days.
    ** Used chewing tobacco or snuff during the 30 days preceding the survey.
    ${ }^{\dagger \dagger}$ Ninety-five percent confidence interval.

[^14]:    * Ever tried any form of cocaine, including powder, crack, or freebase.
    $\dagger$ Used cocaine one or more times during the 30 days preceding the survey.
    ${ }^{\S}$ Ever used crack or freebase.
    IEver used illegal steroids.
    **Ever injected illegal drugs. Respondents were classified as injecting-drug users only if they a) reported injecting-drug use not prescribed by a physician and b) answered "one or more" to any of these questions: "During your life, how many times have you used any form of cocaine including powder, crack, or freebase?"; "During your life, how many times have you used any other type of illegal drug such as LSD, PCP, ecstacy, mushrooms, speed, ice, heroin, or pills without a doctor's prescription?"; or "During your life, how many times have you taken steroid pills or shots without a doctor's prescription?"
    ${ }^{\dagger \dagger}$ Not available.
    ${ }^{\$ 5}$ U.S. territories are included as states.
    misurvey did not include students from the state's largest city.

[^15]:    * On $\geq 1$ day(s) during the 30 days preceding the survey.
    ${ }^{\dagger}$ Used chewing tobacco or snuff during the 30 days preceding the survey.
    ${ }^{\S}$ Drank alcohol on $\geq 1$ of the 30 days preceding the survey.
    1 Used marijuana one or more times during the 30 days preceding the survey.
    ** During the 12 months preceding the survey.
    ${ }^{\dagger \dagger}$ Ninety-five percent confidence interval.

[^16]:    *Sexual intercourse during the 3 months preceding the survey.
    ${ }^{\dagger}$ Among currently sexually active students.
    ${ }^{\S}$ Ninety-five percent confidence interval.

[^17]:    ${ }^{*}$ Activities that caused sweating and hard breathing for at least 20 minutes on $\geq 3$ of the 7 days preceding the survey.
    ${ }^{\dagger}$ Such as toe touching, knee bending, or leg stretching during $\geq 4$ of the 7 days preceding the survey.
    ${ }^{\S}$ Such as push-ups, sit-ups, or weight lifting during $\geq 4$ of the 7 days preceding the survey.
    INinety-five percent confidence interval.

[^18]:    ${ }^{*}$ Activities that caused sweating and hard breathing for at least 20 minutes on $\geq 3$ of the 7 days preceding the survey.
    ${ }^{\dagger}$ Such as toe touching, knee bending, or leg stretching during $\geq 4$ of the 7 days preceding the survey.
    ${ }^{\S}$ Such as push-ups, sit-ups, or weight lifting during $\geq 4$ of the 7 days preceding the survey.
    I U.S. territories are included as states.
    ** Survey did not include students from the state's largest city.
    ${ }^{\dagger \dagger}$ Not available.
